

Please Note: Due to variations in native soil types, infiltration rates (Curve) may differ.

The detail shown above is an example of a typical permeable paver installation. Requirements and regulations are different for each municipality. Contact your municipality for specific installation instructions. An industry professional should be consulted to develop a specification for the individual project in accordance with the municipal requirements.

When EcoGrid® will be filled with planted vegetation, the installation detail shown is not adequate. If grass is intended, a typical cross section will consist of compacted sub base and a 3/4" to 1" setting bed.
